

One source of truth per client, checked against every client.

The moment of doubt

- ✖ A colleague unknowingly contradicts an earlier promise.
- 🔍 Nobody knows which document to trust.
- ✂ Client A gets a different approach than client B.

"I found three documents. Which one do I send to the client?"

The idea: two dimensions

↔ HORIZONTAL

The client record

Everything about one client across different divisions, each item linked to who did it.

↑↓ VERTICAL

Across all clients

Same problem elsewhere: what was the solution, and who solved it?

How it works: two directions

● FIND: SEARCHING FOR AN ANSWER

Each result is scored on **three signals**:

- 📄 How often the author worked on this document
- 🏢 How long the author has worked for this client
- 🕒 How much time they spent on it

RESULT

Ranked sources, each with the reason why. Still unsure? Ask:

RECORD EXPERT · HORIZONTAL
JP Jan Peeters
 Knows this client best · 4 yrs · 120 items

PROBLEM EXPERT · VERTICAL
SM Sarah Maes
 Solved the same issue for 3 clients

● CREATE: ADDING SOMETHING NEW

New items get a **confidence check** before saving:

- ↔ Checked against the record, ↑↓ and all other clients.
- ✓ Consistent: saved to the record, linked to you.
- ⚠ **Conflict:** you see the earlier source and choose.

Update record

Update my info

RESULT

A record without duplicates or contradictions. Every item stays linked to who added it, so the next search finds it with a score.

"Now I find the right document in seconds, and I know why I can trust it."

Payroll consultant, with TrustGrid

Where it runs: in the background of your software

IN

What already happens

E-mails, Teams chats, documents, visits and payroll workflows.

TRUSTGRID BACKEND

Links, scores and checks

Links every item to a client and a person, scores it and checks new items.

OUT

Inside existing tools

Scores, warnings and experts show up where people already search and work.

No new app to learn. TrustGrid is a backend service: employees keep their tools, the checking happens behind the scenes.
